

Coming soon to Yolo County...

Mobile Irrigation Lab

The Yolo RCD is partnering with the RCD of Tehama to bring the services of the Mobile Irrigation Lab (MIL) to growers in Yolo County. This is a limited program that will perform 10 irrigation evaluations per year for the next 3 years (2017, 2018, 2019).

What is the MIL?

It's a service that performs on-site evaluations of agricultural irrigation systems in order to determine the efficiency rating and the application rate. The goal of the MIL is to give growers an overall snapshot of their irrigation system, provide scheduling information, and give recommendations to help improve efficiency.

How does it work?

The MIL manager will contact you to schedule an evaluation. You will need to have a representative to meet with the MIL crew for approximately 10 minutes to provide information about the irrigation system. The MIL only requires the grower to have an irrigation system design map or the ability to draw a sketch of pipe locations.

This is a limited opportunity!
